

Ultra Flat Gain, Low Noise/High Dynamic Range

Monolithic Amplifier

PGA-105+

50Ω 0.04 to 2.6 GHz

The Big Deal

- Ultra Flat Gain
- Low Noise, High Dynamic Range
- Excellent Input and Output Return Loss without use of external matching components

SOT-89 PACKAGE

Product Overview

PGA-105+ (RoHS compliant) is an advanced ultra flat gain amplifier fabricated using E-PHEMT technology and offers extremely high dynamic range over a broad frequency range and with low noise figure. In addition, the PGA-105+ has good input and output return loss over a broad frequency range without the need for external matching components. Lead finish is SnAgNi and is enclosed in a SOT-89 package for good thermal performance.

Key Features

Feature	Advantages
Broad Band: 0.04 to 2.6 GHz	Broadband covering primary wireless communications bands: Cellular, PCS, LTE, WiMAX
Ultra Flat Gain: ±0.25 dB typ. 0.1 to 2 GHz	Ideal for use in broad band or multi band applications where gain flatness is critical.
High IP3 Versus DC power Consumption: 39 dBm typical at 0.9 GHz 35 dBm typical at 2 GHz	The PGA-105+ provides good IP3 performance relative to device size and power consumption. The combination of the design and E-PHEMT Structure provides enhanced linearity over a broad frequency range as evidence in the IP3 being typically 15 dB above the P 1dB point. This feature makes this amplifier ideal for use in: <ul style="list-style-type: none"> • Driver amplifiers for complex waveform up converter paths • Drivers in linearized transmit systems • Secondary amplifiers in ultra High Dynamic range receivers
No External Matching Components Required	Unlike competing products, Mini-Circuits PGA-105+ provides outstanding gain flatness and Input and Output Return Loss of 23 dB up to 2.6 GHz without the need for any external matching components.
Low Noise Figure: 1.7 - 2.0 dB typ.	A unique feature of the PGA-105+ which separates this design from all competitors is the low noise figure performance in combination with the high dynamic range.

Notes

- A. Performance and quality attributes and conditions not expressly stated in this specification document are intended to be excluded and do not form a part of this specification document.

Ultra Flat Gain, Low Noise

Monolithic Amplifier

0.04-2.6 GHz

Product Features

- Excellent gain flatness, ± 0.25 dB over 0.1-2.0 GHz
- Gain, 15.0 dB typ. at 2 GHz
- High IP3, 39 dBm typ. at 0.9 GHz
- P1dB 19.3 dBm typ. at 2 GHz
- Low noise figure, 1.9 dB at 2 GHz
- No external matching components required

PGA-105+

CASE STYLE: DF782

Typical Applications

- Base station infrastructure
- Portable Wireless
- CATV & DBS
- MMDS & Wireless LAN
- LTE

+RoHS Compliant

The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

General Description

PGA-105+ (RoHS compliant) is an advanced ultra flat gain amplifier fabricated using E-PHEMT technology and offers extremely high dynamic range over a broad frequency range and with low noise figure. In addition, the PGA-105+ has good input and output return loss over a broad frequency range without the need for external matching components. Lead finish is SnAgNi. It has repeatable performance from lot to lot and is enclosed in a SOT-89 package for good thermal performance.

simplified schematic and pin description

Function	Pin Number	Description
RF IN	1	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
RF-OUT and DC-IN	3	RF output and bias pin. DC voltage is present on this pin; therefore a DC blocking capacitor is necessary for proper operation. An RF choke is needed to feed DC bias without loss of RF signal due to the bias connection, as shown in "Recommended Application Circuit", Fig. 2
GND	2,4	Connections to ground. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.

Characterization Test Circuit

Fig 1. Block Diagram of Test Circuit used for characterization. (DUT tested on Mini-Circuits Characterization test board TB-665+) Gain, Return loss, Output power at 1dB compression (P1 dB) , output IP3 (OIP3) and noise figure measured using Agilent’s N5242A PNA-X microwave network analyzer.

Conditions:

1. Gain and Return loss: Pin= -25dBm
2. Output IP3 (OIP3): Two tones, spaced 1 MHz apart, 0 dBm/tone at output.
