## DISTINCTIVE CHARACTERISTICS

## Standard with Enhanced LED Illumination:

- Broad and even light diffusion
- Consistent backlighting
- Low energy consumption

Programmable LCD<br>Variety of LED Backlighting Colors<br>Rubber Dome<br>Epoxy Sealed Straight PC Terminals

Programmable to display graphics, alphanumeric characters and animated sequences.
Integrated liquid crystal display provides wide viewing angle with high contrast and clarity.
Wider viewing area $17.0 \mathrm{~mm} \times 13.0 \mathrm{~mm}$ (horizontal $\times$ vertical) at $36 \times 24$ pixels.
Dome gives crisp tactile feedback to positively indicate circuit transfer.
High reliability and long life of one million actuations minimum.
Epoxy sealed terminals prevent entry of solder flux and other contaminants.
Optional accessories available to enhance panel design and simplify production process.

## PRECAUTIONS FOR HANDLING \& STORAGE OF LCD $36 \times 24$ DEVICES

## Handling

1. The IS Series devices are electrostatic sensitive.
2. Limit operating force to keytop to 100.0 N maximum, as excessive pressure may damage the LCD device.
3. The IS series devices are not process sealed.
4. If the LCD is accidentally broken, avoid contact with the liquid and wash off any liquid spills to the skin or clothing.
5. Clean cap surface with dry cloth. If further cleaning is needed, wipe with dampened cloth using neutral cleanser and dry with clean cloth. Do not use organic solvent.
6. Recommended soldering time and temperature limits:

Do not exceed $70^{\circ} \mathrm{C}$ at the LCD level.
Wave Soldering: see Profile B in the Supplement section.
Manual Soldering for Switch: see Profile A in the Supplement section.
Manual Soldering for Display: see Profile B in the Supplement section.
7. Recommendation for backlight color uniformity: Use constant current driver. For current limiting resistor method, the power source should be at least twice the backlight LED forward voltage.
8. The VLC voltage should not be applied before logic voltage. If VLC voltage is present before logic voltage, it may cause the driver logic to freeze and damage the LCD, and the driver logic may become damaged.
9. Backlight Forward Current should not exceed the derated Absolute Maximum Forward Current based on the temperature.
10. Excessive images may result after the same image is emitted continuously for an extended period of time.

## Storage

1. Store in original container and away from direct sunlight.
2. Keep away from static electricity.
3. Avoid extreme temperatures, high humidity, gaseous substances, and all forms of chemical contamination.
